

STATISTICAL INFORMATION

STATISTICAL INFORMATION

Revenue Tonnage Loaded and Discharged by Port

The data on these two pages represent the revenue tonnage reported to PMA in 2015 by category by port. There are six sets of columns: one set for total revenue tonnage and one set for each of the five reporting categories.

Since November 1989, tonnage has been reported in "Loaded" and "Discharged" categories. Concurrent with that change in reporting, the summaries of the tonnage data which had been traditionally prepared for statistical purposes by "port area" were further divided into individual port summaries.

Ports have been arranged geographically south to north along the coast. Ports along bays or rivers are listed as though the coastline followed the edge of the interior body of water.

Revenue Tonnage Loaded and Discharged by Port,

Total tonnage reported for the port.
 Chg from 2014 shows the percent 2015 tonnage changed from 2014 tonnage.
 % of Coast shows the percentage that the port's tonnage represents of the coast total.
 % Loaded: % Discharged shows the ratio of the percentage of total tons or TEUs loaded in the port to the corresponding percentage of tons or TEUs discharged. The categories "loaded" and "discharged" cannot be used synonymously with "export" and "import" because these data include not only foreign trade cargo but also U.S. intercoastal cargo, cargo bound to and from Alaska and Hawaii, and discharged coastwise cargo.
